HAY SUPPORTER

Pelleted high fiber horse feed

Alltech Ingredients:
Sel-Plex[®]

May replace either a portion of or all forages

High in digestible fiber

Will meet nutrient requirements for maintenance when fed at a minimum of 1% of body weight per day

Feeding Recommendations

Feed 0.5 to 2 lbs per 100 lbs of body weight per day. Feeding levels may vary depending on the quality and availability of forage (hay/pasture). Seasons and the general condition of the horse will also impact daily feed allowances. Feeding at least 1 lb per 100 lbs of body weight per day with good quality forage will meet or exceed nutrient requirements for horses at maintenance.

Hay Supporter may be used to replace all forage. When fed in this manner, horses should receive at least 1.5 lbs per 100 lbs of body weight per day. To minimize boredom and the development of vices, some long-stem forage should also be fed.

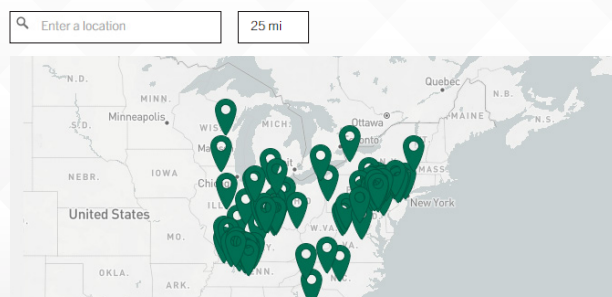

Free-choice salt and fresh, clean water should be available at all times.

Formulated with Solutions from 

SEL-PLEX®

Our Story

When McCauley Bros. Feed & Seed, Inc. was initially established in 1938, FDR was president, the ballpoint pen had just been invented, and a gallon of gas cost a whopping 20 cents.

Some 20 years later, with a passion for Thoroughbred horses and a heartfelt desire to take the guesswork out of equine nutrition, Graham McCauley began converting his family's traditional farm store into an equine-focused feed business that was, in many ways, the first of its kind.

Although many years have passed, our focus on feeding horses with wholesome, highly effective ingredients remains the same. We have had the pleasure of feeding countless horses — from Olympians to Triple Crown winners and many beloved companions in between — all while maintaining the highest standards of feed quality and safety.
