Feeding Recommendations

McCauley's Omega Bran can be fed alone or mixed with feed. The mini-pellet form allows for easy feeding and mixing. Please note: Omega Bran should be introduced slowly.

The following recommendations are for an average-size riding horse (1,000 to 1,200 lbs). The actual feeding amounts should be adjusted according to the individual body weight of the horse.

- One pound of Omega Bran can replace 1.5 to 2 lbs of a typical feed without sacrificing vitamin levels or upsetting mineral balances.
- To improve hair coat condition or for general maintenance, feed 0.25 to 0.5 lbs per day.
- Adding 1 to 2 lbs of Omega Bran to the diet will provide significant weight gain.

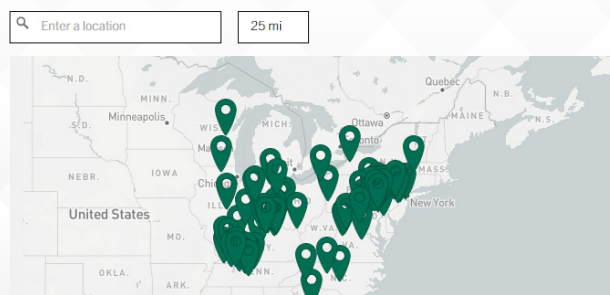

For nutritionally challenged horses, Omega Bran can serve as the sole grain source. For additional calories with even less bulk, McCauley's Rice Bran Oil is recommended in place of Omega Bran.

Our Story

When McCauley Bros. Feed & Seed, Inc. was initially established in 1938, FDR was president, the ballpoint pen had just been invented, and a gallon of gas cost a whopping 20 cents.

Some 20 years later, with a passion for Thoroughbred horses and a heartfelt desire to take the guesswork out of equine nutrition, Graham McCauley began converting his family's traditional farm store into an equine-focused feed business that was, in many ways, the first of its kind.

Although many years have passed, our focus on feeding horses with wholesome, highly effective ingredients remains the same. We have had the pleasure of feeding countless horses — from Olympians to Triple Crown winners and many beloved companions in between — all while maintaining the highest standards of feed quality and safety.
